# Butler Order-Trac - Quick Start Guide

Welcome to Butler Order-Trac. Butler Order-Trac is an application available for download to your tablet or smart phone that provides detailed information on your order and delivery in real time. View inbound shipments, truck manifest, or search for parts, packages or package contents. The app includes a scanning tool and map functions to help locate materials on your jobsite. The 3D part display option will aid in staging materials to speed the installation process. The communication options allow for easy coordination with your project manager via phone or email with pictures from your jobsite.

## Access Butler Order-Trac

Open the Application on your device.

## Login Screen

For iOS devices, the first time the app is opened a message will appear to allow Butler Order-Trac to send notifications. Select Allow to receive notifications of shipments. You can turn this on/off in General Settings under the App at any time.

For Android devices, the ability to allow the app to send you notifications is set during the initial installation of Butler Order-Trac.

### Login

builder@butlermfg.com

●●●●●●●●

Sign In

[Forgot Password?](#)

[New User?](#)

[Getting Started](#)

[Privacy Policy](#)

From the login screen, existing users input their login and password to enter the application, new users should select “New User” (reference pg 3 for more instructions).

# Butler Order-Trac - Quick Start Guide

## New User Registration

Select "New User?" to register a new user with the app.

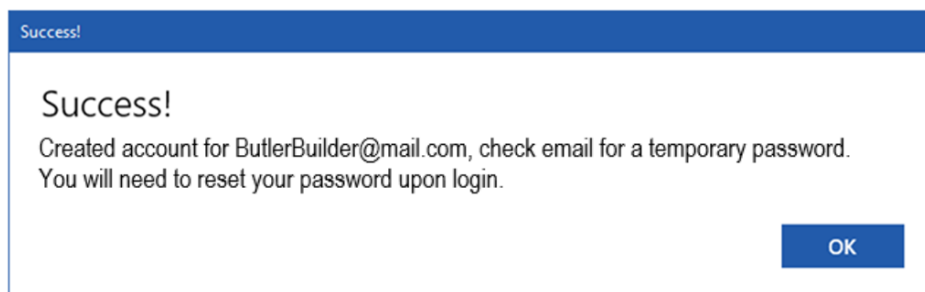

Butler Builders enter their MyBuildernet email address, enter desired user name, and select "Submit".

Other authorized users, within Buildership or a subcontractor such as an erector should enter any valid email, enter desired user name, and select "Submit".

*Note: The user name will be used throughout the application for communications & notifications.*

Once submitted, an email will be sent to the email address used for registration. The email will contain a temporary password. Use the temporary password to login into the app. Once in the app the user will be prompted to create a new password.

## Manage Orders

The Manage Orders screen will provide a list of available orders for the user to activate. Use the Search bar to enter a partial order name, order number, or city to filter your list. To subscribe or unsubscribe to an order use the toggle button on the right side of the screen. When complete, select “Done”.

### Icons and Tools

Search by order name, order number, or location.

Order is active

Order is not active

Opens the Settings screen

Done

Complete changes

Note for Windows 10 devices you may need to select the more icon  and then select “Done”

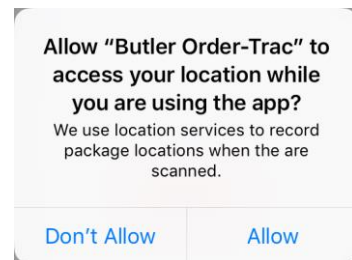

Butler Builders will have a list of all accessible orders. Butler Builders also control the available orders for their designees. ([click here for the Other Authorized User Setup and Management overview](#))

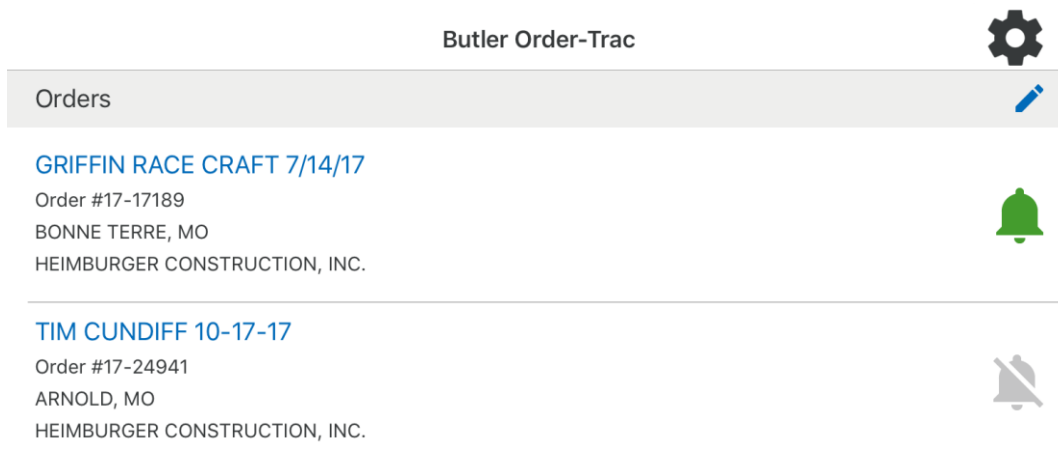

# Butler Order-Trac - Quick Start Guide

## Orders List

For iOS devices, after you open any order for the first time, a message will appear requesting the use of location data. By selecting “Allow” you will be able to use the GPS mapping feature when scanning. This allows the Map Location function to be used to see where material was last scanned.

The Orders screen will include all active orders. To manage shipping notifications, select the bell icon as needed. To view order information, select the desired order. To add or remove orders select the Edit Icon to be taken to the Manage Orders screen. To remove an order, you may also swipe any order to the right and select “Remove”.

## Icons and Tools

Edit Orders – This will open the Manage Orders screen

Notifications on – User will receive email notifications of shipments

Notification off

Settings will open the Settings window ([click here to go to the Settings overview](#))

For iOS devices, swipe any order to the left to activate the “Remove” option. This will remove that order from the active Orders List. (Note: This only removes the order from the device. The order information will remain in the cloud).

For Android devices, press and hold an order to view the “Remove” option shown at the header of the app.

# Butler Order-Trac - Quick Start Guide

## Order Information

The Order Information provides detailed order, delivery information, and job-site support.

Date of the last update of the order data  
Butler Project Manager contact information

## Fast Scan 5

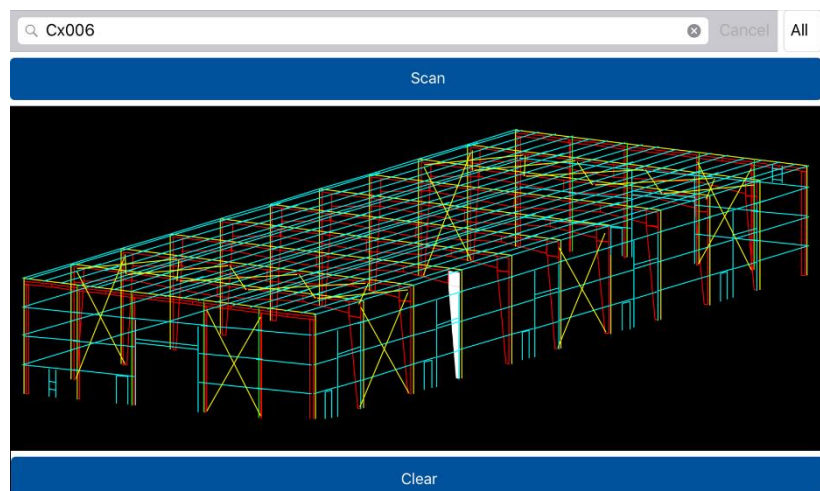

Fast Scan allows you to scan multiple items quickly. The scanning function uses the device's camera. After each successful scan, the device notifies the user with a beep or sound. Scanning the same bar code multiple times will not be a problem.

If a part tag is not scannable there is an option to manually mark a package as located here from the Part/Package screen. [\(Select here to view the Detailed Part/Package Information overview on PG:12\)](#)

## 3D Parts Search 6

Input a part mark or use the Scan option to identify where a part is located on the 3D building model.

Use the "Filter" in the top right corner of the 3D Display window to view "All" phases combined or select a specific phase of the 3D building model to view.
